

# Installation Instruction

1. Open the packing box and carefully remove the motorcycle and accessories.

2. Ensure you have all the necessary tools.

3. Remove the front brake caliper in order to prepare for installing the front wheel.

4. Install the front wheel by placing the spacers before tightening the fixed nut.

5. Install the front brake caliper.

6. Install the handlebar and rear shock.

7. Install the front fender.

8. Install the front number plate.

9. Install the handlebar pad.

10. Once all parts are securely installed, you can start enjoying your riding experience!

Please note: It is important to follow all safety precautions and guidelines while installing and using the motorcycle.
